CUSTOM AIR HANDLING UNITS

World-class custom air handling solutions
for commercial markets, backed by over
50 years of quality, service and support.

www.Miller-Picking.com

AUTHENTIC CRAFTSMANSHIP, TRUSTED EXPERTISE.

We're setting a higher standard in custom air handler design and support.

Since 1961, Miller-Picking™ has built a reputation for delivering the highest quality custom air handling products on the market, backed by the most proactive service and support in the industry.

Starting with just a handful of employees from a small factory in Johnstown, Pennsylvania, Miller-Picking™ focused on providing custom configurations to underserved markets. But it didn't take long for our focus on craftsmanship and relationship-building to set the standard for custom air handling solutions for a variety of industries.

Today, as part of the Johnson Controls family of commercial comfort brands, we continue the Miller-Picking™ legacy of delivering world-class custom air handling solutions with industry-leading quality and advanced performance. Miller-Picking™ is more than custom air handlers and technology:

Our name represents the ability to anticipate our customers' needs, provide trusted expertise and deliver consistently superior products and support. We take pride in knowing every unit we sell is backed by the Miller-Picking™ tradition of creating an experience that is tailor-made to our customers' individual needs.

The result? A better value in custom design, with superior reliability, more attentive service and an ongoing drive to improve products and elevate performance. By combining the values of the past with the performance of today, Miller-Picking™ is setting a higher standard in custom air handling solutions.

CUSTOM DESIGN

AIR HANDLING EXPERTISE

PREMIUM SUPPORT

PERFORMANCE BUILT ON INTEGRITY.

Proactive service and support:
How we get it done is the difference.

QUALITY

Designed, engineered and assembled in the USA, Miller-Picking™ custom air handlers benefit from state-of-the-art testing facilities and the world-class manufacturing of parent company Johnson Controls to continue delivering products with industry-leading quality and proven reliability. It's consistent excellence upon which the Miller-Picking™ name is built.

FLEXIBILITY

With a custom air handling solution from Miller-Picking™, flexibility comes standard. Whether you choose to

work directly with our highly trained application engineers, or use our comprehensive software tools, you'll experience the advantages of working with a smaller company backed by the resources only a larger company can deliver. Our systems are designed for customization options and faster support, and we have experience in virtually every type of commercial market to help you meet any applicable, industry-specific standard.

RESPONSIVENESS

Creating a higher standard of proactive support requires a level of

service fundamentally different than other air handling solution providers. At Miller-Picking™, this difference can be found in our customer response time, application support team and in-house components experts who ensure parts are always available when needed – without relying on outside suppliers.

Our focus on quality, flexibility and responsiveness results in a customer experience unlike any other. Premium products backed by trusted expertise: It's been the Miller-Picking™ tradition for over 50 years.

1

Performance

Miller-Picking™ custom air handling units deliver performance optimized for the unique conditions in your facility, with features including:

- Leakage: No more than 1/2% of rated CFM at up to 12" W.C.
- Deflection: No more than L/240 of panel length at up to 12" W.C.
- Thermal: UTB™ Ultra Thermal Break (no thru-metal)
- Fan Systems: Fan arrays with highly efficient direct-drive AC induction or EC motors
- Energy Recovery: Wheels, plate heat exchanger and heat pipes

2

Construction

We build your system in any shape or size within increments of 1" or less. And whether your units are primarily indoors or outdoors, they will be built to last:

- Casing of 2", 3" or 4" panels with Ecomate® injected foam
- Base: Welded structural steel or aluminum
- Floors that are sealed, stitch welded, fully welded or full washdown with upturned lip
- Exterior Skin: Pre-painted steel or embossed aluminum
- Removable lifting lugs
- Full-featured vestibules and corridors

3

Manufacturing

Authentic quality is built into every Miller-Picking™ custom air handling solution we deliver. Our industry-leading quality and world-class testing benefit from:

- Design, engineering and assembly in the United States
- Short lead times
- Consistent product quality
- Custom configuration-ready manufacturing processes
- Craftsmanship at every level
